Past performance is not an indicator or a guarantee of future performance. The value of shares in the fund and income received from it can go down as well as up, and investors may not get back the full amount invested. All performance data shown is in the currency stated, include reinvested dividends and are net of management fees. Sales charges and other commissions, taxes and other relevant costs paid by the investor are not included in the calculations. Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments. The fund offers other share classes subject to different fees and expenses, which will affect their performance. Please see the prospectus for details. Up to date performance figures can be found on our local website.

References to indices are made for comparative purposes only and are provided to represent the investment environment existing during the time periods shown. When performance for either the portfolio or its benchmark has been converted, different foreign exchange closing rates may be used between the portfolio and its benchmark.

## Portfolio Data Derivatives Disclosures

Market value figures reflect the trading value of the investments. Notional exposure figures are intended to estimate the portfolio's exposure, including any hedged or increased exposure through certain derivatives held in the portfolio (or their underlying reference assets). Average Duration, Average Weighted Maturity and Yield to Maturity reflect certain derivatives held in the portfolio (or their underlying reference assets). Portfolio breakdown percentages may not total 100% and may be negative due to rounding, use of any derivatives, unsettled trades or other factors.

## What Are the Key Risks?

The value of shares in the Fund and income received from it can go down as well as up and investors may not get back the full amount invested. Performance may also be affected by currency fluctuations. Currency fluctuations may affect the value of overseas investments. The Fund invests mainly in debt securities issued by government or government-related entities in any country and in derivatives. Such securities and derivatives have historically been subject to price movements, generally due to interest rates, foreign exchange rates or movements in the bond market. As a result, the performance of the Fund can fluctuate over time. The Fund may distribute income gross of expenses. Whilst this might allow more income to be distributed, it may also have the effect of reducing capital. Other significant risks include: Chinese market risk, credit risk, foreign currency risk, derivatives instruments risk, liquidity risk, emerging markets risk. For full details of all of the risks applicable to this Fund, please refer to the "Risk Considerations" section of the Fund in the current prospectus of Franklin Templeton Investment Funds.

**Fund Overview:** The **Distribution Yield** is based on the most recent month's distribution and shown as an annualized percentage as of the date shown. It does not include any preliminary charge and investors may be subject to tax on distributions. Information is historical and may not reflect current or future distributions.

**Fund Measures:** The average credit quality (ACQ) rating may change over time. The portfolio itself has not been rated by an independent rating agency. The letter rating, which may be based on bond ratings from different agencies (or internal ratings for unrated bonds, cash and equivalents), is provided to indicate the average credit rating of the portfolio's underlying investments and generally ranges from AAA (highest) to D (lowest). For unrated bonds, cash and equivalents, ratings may be assigned based on the ratings of the issuer, the ratings of the underlying holdings of a pooled investment vehicle, or other relevant factors. The ACQ is determined by assigning a sequential integer to all credit ratings AAA to D, taking a simple, asset-weighted average of investments by market value and rounding to the nearest rating. The risk of default increases as a bond's rating decreases, so the ACQ provided is not a statistical measurement of the portfolio's default risk because a simple, weighted average does not measure the increasing level of risk from lower-rated bonds. The ACQ may be lower if cash and equivalents are excluded from the calculation. The ACQ is provided for informational purposes only. Derivative positions are not reflected in the ACQ.

Yield figures quoted should not be used as an indication of the income that has or will be received. Yield figures are based on the portfolio's underlying holdings and do not represent a payout of the portfolio.
